DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, 914, drawn to CD14-like proteins free of O-glycosylation.

Group II, claim(s) 8, 15-17, drawn to method of making CD14-like protein.

Group III, claim(s) 18 and 19, drawn to methods of treatment comprising administering CD14-like protein.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The PCT rules define a special technical feature as a feature which defines a contribution over the prior art.

The first claimed invention fails to recite such a feature, since isolated proteins having no O-glycosylation and at least 70% homology of amino acid sequence with human serum CD14 are found in the prior art. U.S. Patent 5,543,303 (Goyert, 8/1996) discloses human serum CD14 protein that is produced in a prokaryotic host cell, lacking any glycosylation (see column 2, lines 27-36). Since the first claimed invention lacks a special technical feature, the other claimed inventions cannot share a special technical feature with the first claimed invention. The invention of Group II is patentably distinct

Art Unit: 1646

from the product of Group I because the product can be made by a materially different method, such as recombinant protein expression. The invention of Group III is patentably distinct from the product of Group I because the product can be used in methods that are materially different from the therapy of Group III, such as in the production of antibodies. The methods of Groups II and III are patentably distinct because each recites method steps not required by the other, and the search off both methods in one patent application would result in an undue search burden.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
